

VORTECHPLUS

POWDER COATING BOOTH

Traditional powder booth layout, allowing for manual coating.

The VortechPlus™ provides powder utilization of up to 95%.

Maximum color change efficiency optimized for multiple color changes per shift.

The plastic booth upper structure minimizes powder left in process and speeds up cleaning.

Full integration of the VortechPlus with the Chameleon™ Color Management System means fast color changes.

To meet the National Fire Protection Association (NFPA) Guidelines for safety, the VortechPlus Series booth comes equipped with a flame detection unit for automatic gun applications.

The VortechPlus utilizes the power of multiple mini-cyclones that are easy to clean and eliminate the need for ductwork between the booth and separator unit.

The remote cartridge collection unit can be located inside or outside your powder room or facility.

Advanced aerodynamic booth and floor design minimizes powder in process.
