

Binks 102-310 Mavrick Bleaching Gun designed for wood finishers

The Binks Dual Component Mavrick Bleaching Gun is designed specifically for bleaching wood surfaces prior to the application of furniture finishes. This bleaching helps to attain lighter, brighter, clearer finishes.

The Mavrick Bleaching Gun should be used with a low pressure, 1:1 ratio pump, and it requires two stainless steel tips (not included, please specify).

The Bleaching Gun sprays all wood bleaching materials, and offers several benefits that make it a “must” for wood furniture finishers:

- * **Longer Life**—The gun is constructed of all stainless steel wetted parts to help fight corrosion.
- * **Less Maintenance**—The gun’s simple design has only three moving parts: two fluid needles and the trigger.
- * **Less Downtime**—Two stainless steel fluid filters on the material inlets prevent tip clogging.
- * **No Accidental Leaking**—The Bleaching Gun has non-metallic seats for a positive shutoff that prevents accidental leaking.
- * **Easy Operation**—An oversized, 4-finger trigger makes it easier for the operator to spray with protective rubber gloves on. ***All operators who spray bleaching materials must wear rubber gloves.***
- * **No Pre-Mixing**—The gun’s dual spray nozzles are designed to externally mix bleaching materials “in” the spray pattern, so no pre-mixing of materials is required.
- * **Safe**—A safety trigger prevents accidental triggering.
